

Creating an EPS file  
using PageMaker v6 - v6.5

---

---

## About this document

This document describes how to use *PageMaker* to prepare and create an EPS file for digital reproduction in Fairfax publications.

## Preparation

Before creating an EPS file you should familiarise yourself with advertising prepress requirements by reading *Fairfax PDF Guidelines*, which is available from the [Downloads](#) page at [www.fairfax.com.au/specs](http://www.fairfax.com.au/specs).

## Software requirements

To use these instructions you will need:

- PageMaker v6 or 6.5
- Mac OS8.6 or later.
- Pagemaker on windows requires font management ATM be installed and latest P.S. drivers in order to embed fonts.

---

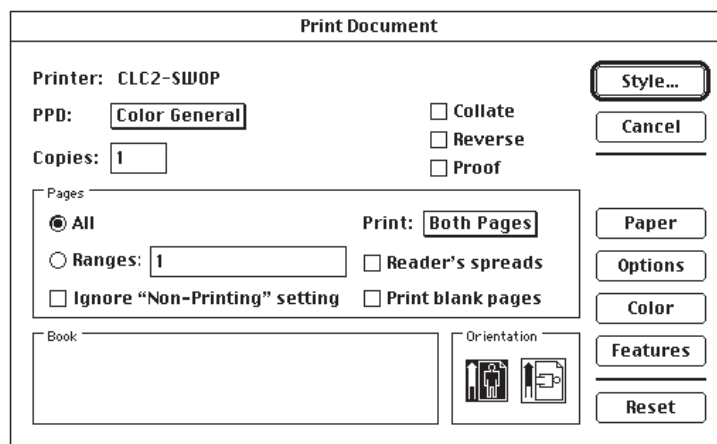

## 1. Preflighting

Before saving your EPS file, check to ensure that:

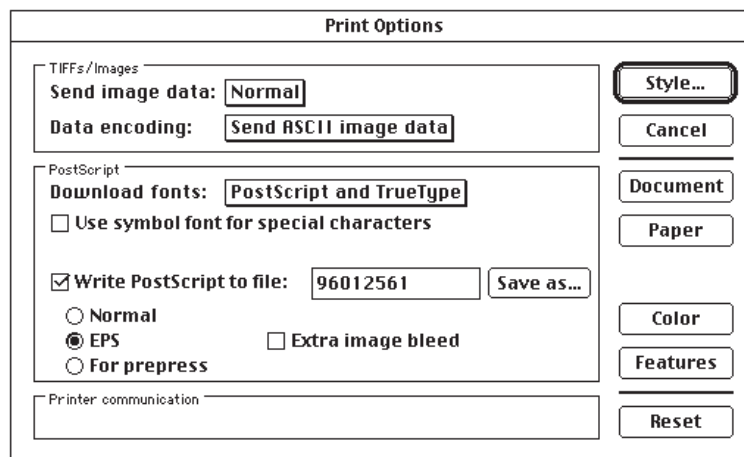

1. The document has only one page (non-spread ads) and the page size has been customised so that it is the same as the ad size.
2. All fonts are available.
3. All linked images are available.
4. All colours are specified in CMYK colour spaces, including those in linked images.
5. All text specified as paper, must be converted to CMYK.

## 2. Saving the file

- In the **Chooser** (Mac) or **Page Setup** (Windows), select any PostScript printer.
- From the **File** menu, choose **Print...**

- In the PPD popup menu, select **Colour General** (for color ads) or **General** (for mono ads).
- Select **Options** and set them as shown below. Select the **Write PostScript to file:** checkbox, then choose the **Save as...** button to select a destination and enter a file name. You should name your ad with The Age/Fairfax booking ID number, which is supplied at the time of

- Select the **Save** button to save the file.  
booking.
